

Expensify Launches Native Integration with Rillet, the AI-Native ERP

September 1, 2026

Finance teams running Rillet can now sync expenses, corporate card spend, and reimbursements directly into their general ledger

SAN FRANCISCO--(BUSINESS WIRE)--Sep. 1, 2026-- Expensify, Inc. (Nasdaq: EXFY), the easiest way to manage expenses, corporate cards, and travel, today announced a native [integration](#) with Rillet, the AI-native ERP.

Businesses running Rillet can now connect to Expensify in minutes for an automatic, two-way sync:

- Rillet categories, dimensions, and tax rates sync into Expensify, so every expense is coded correctly at the point of spend
- Out-of-pocket expenses post back to Rillet as vendor bills
- Company card spend posts as credit card charges to the right accounts
- Reimbursements and card transactions stay in sync automatically

"Rillet is building exactly the kind of modern ERP our customers are moving to, and this integration means their expenses and card spend just handle themselves. No CSVs, no chasing miscodes. That's what accounting should feel like," said Nick Tooker, Head of Partnerships at Expensify.

"The future of finance is real-time. With Rillet, when something happens in the business, the books already reflect it. This integration brings expenses into that loop: an employee swipes a card and the transaction arrives in the general ledger coded and reconciled, which is what makes a continuous close possible. The books stay current all month," said Nadiv Rahman, Head of Partnerships at Rillet.
